Subject: Village of St. Bernard Landfill  
Probe Monitoring Results, September 29, 2016

Dear Ms. Buchanan:

Enclosed please find the results of the contingency gas monitoring performed at MP-10 on behalf of the Village of St. Bernard at the closed St. Bernard Landfill on September 29, 2016.

Combustible gas concentrations above the compliance threshold were detected at MP-10. MP-10 had an initial concentration of 10.8 percent and a sustained concentration of 23.3 percent. The immediate verification sample at MP-10 had an initial concentration of 6.5 percent and a sustained concentration of 15.9 percent. Contingency Monitoring at MP-10 will therefore continue as described in the EGMP.

The concentration of methane at MP-10 appears to be decreasing. The absence of pressure at MP-10 indicated that there is no driving force that could cause gas migration over any significant distance. The methane detected at MP-10 is likely either a localized concentration or is present due to migration driven only by a concentration gradient/diffusion. At this time, no further remedial actions are proposed.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
